29-Jul-2026

Dear Dr. Hashemi:

I am sorry to inform you that your manuscript # IJA-2026-0085 entitled "Environmental Selection of Thymine over Uracil in Prebiotic Chemical Evolution: Insights from a Kinetic Monte Carlo Model" has not been accepted for publication in International Journal of Astrobiology.

The comments of the reviewer(s) which led to this decision can be found at the bottom of this letter.

Thank you for considering the International Journal of Astrobiology for the publication of your research. I hope the outcome of this specific submission will not discourage you from the submission of future manuscripts.

Sincerely,

Dr. Frances Westall

Associate Editor, International Journal of Astrobiology

To: Reza Hashemi <mrhashemi2000@gmail.com>, "frances.westall@cnrs.fr" <frances.westall@cnrs.fr>

Dear Author,

I apologize for the confusion.

The message you received is a default system template, which states that reviewers' comments are attached. However, in your case, the Associate Editor decided not to send the manuscript out for peer review, and it was therefore desk rejected.

As a result, there are no reviewer comments associated with this decision.

Thank you for your understanding. If you need any further clarification, please do not hesitate to contact me.

Best wishes.

Mrs. Maria Estrada-Flórez

Subject: Regarding the Decision and Process for Manuscript IJA-2026-0085

Dear Mrs. Estrada-Flórez,

Thank you for your prompt response and for clarifying the confusion regarding the decision letter.

While I appreciate the clarification, I must express my professional disappointment regarding the editorial process. Receiving a system template that explicitly claims reviewer comments are attached, only to later discover it was a "default template" for a desk rejection, is highly misleading and contrary to the transparency expected from a prestigious journal like the International Journal of Astrobiology.

Moreover, a desk rejection, while within the editor's prerogative, should typically be accompanied by a brief scientific justification—such as the manuscript being "out of scope" or "lacking novelty." In this case, the absence of any specific reasoning leaves the author in the dark regarding why the work was deemed unsuitable for peer review.

This is particularly regrettable because the manuscript presents the "Matter World Hypothesis," a paradigm shift that challenges the conventional RNA World model. By utilizing a rigorous Kinetic Monte Carlo simulation (UPDSF v4.4) and validated prebiotic chemical parameters, the work provides a quantitative explanation for the environmental selection of Thymine over Uracil—a fundamental question in the origins of life.

I believe that such a provocative and evidence-based hypothesis deserves, at the very least, a brief explanation as to why it did not meet the criteria for peer review.

Best wishes.

Dr. Reza Hashemi
