29-Jul-2026

Dear Dr. Hashemi:

I am sorry to inform you that your manuscript # IJA-2026-0085 entitled "Environmental Selection of Thymine over Uracil in Prebiotic Chemical Evolution: Insights from a Kinetic Monte Carlo Model" has not been accepted for publication in International Journal of Astrobiology.

The comments of the reviewer(s) which led to this decision can be found at the bottom of this letter.

Thank you for considering the International Journal of Astrobiology for the publication of your research. I hope the outcome of this specific submission will not discourage you from the submission of future manuscripts.

Sincerely,

Dr. Frances Westall

Associate Editor, International Journal of Astrobiology

To: Reza Hashemi <mrhashemi2000@gmail.com>, "frances.westall@cnrs.fr" <frances.westall@cnrs.fr>

Dear Author,

I apologize for the confusion.

The message you received is a default system template, which states that reviewers' comments are attached. However, in your case, the Associate Editor decided not to send the manuscript out for peer review, and it was therefore desk rejected.

As a result, there are no reviewer comments associated with this decision.

Thank you for your understanding. If you need any further clarification, please do not hesitate to contact me.

Best wishes.

Mrs. Maria Estrada-Flórez
Editorial Office
International Journal of Astrobiology

Subject: Regarding the Decision and Process for Manuscript IJA-2026-0085

Dear Mrs. Estrada-Flórez,

Thank you for your prompt response and for clarifying the confusion regarding the decision letter.

While I appreciate the clarification, I must express my professional disappointment regarding the editorial process. Receiving a system template that explicitly claims reviewer comments are attached, only to later discover it was a "default template" for a desk rejection, is highly misleading and contrary to the transparency expected from a prestigious journal like the International Journal of Astrobiology.

Moreover, a desk rejection, while within the editor's prerogative, should typically be accompanied by a brief scientific justification—such as the manuscript being "out of scope" or "lacking novelty." In this case, the absence of any specific reasoning leaves the author in the dark regarding why the work was deemed unsuitable for peer review.

This is particularly regrettable because the manuscript presents the "Matter World Hypothesis," a paradigm shift that challenges the conventional RNA World model. By utilizing a rigorous Kinetic Monte Carlo simulation (UPDSF v4.4) and validated prebiotic chemical parameters, the work provides a quantitative explanation for the environmental selection of Thymine over Uracil—a fundamental question in the origins of life.

I believe that such a provocative and evidence-based hypothesis deserves, at the very least, a brief explanation as to why it did not meet the criteria for peer review.

Best wishes.

Dr. Reza Hashemi

Subject: Clarification Request – Manuscript IJA-2026-0085

Dear Mrs. Estrada-Flórez and Dr. Westall,

I hope this message finds you well.

I am writing in relation to manuscript IJA-2026-0085, "Environmental Selection of Thymine over Uracil in Prebiotic Chemical Evolution: Insights from a Kinetic Monte Carlo Model."

In the decision letter and the subsequent clarification, it was explained that the manuscript was desk-rejected and was not sent out for peer review.

I noticed, however, that the ScholarOne system displayed the status "Awaiting Reviewer Selection" for a considerable period before the final decision was issued. I am attaching screenshot of the system status for your reference.

I would be grateful if you could kindly clarify how this status relates to the editorial process that was followed in this case.

Thank you very much for your time and assistance.

Sincerely,
Dr. Reza Hashemi

Dear Dr. Hashemi,
The reason for the delay in dealing with your manuscript is that it was only recently put on my action list - and I have just had an operation therefore I myself am a bit slow.

Yours sincerely
Frances Westall

Subject: Request for Clarification Regarding the Editorial Handling of Manuscript IJA-2026-0085

To: IJA Editorial Office (Mrs. Maria Estrada-Flórez)
Cc: Dr. Frances Westall

Dear Dr. Rocco Mancinelli,

Editor

International Journal of Astrobiology

I hope this message finds you well.

I am writing to respectfully request your clarification regarding the editorial handling of my manuscript **IJA-2026-0085**, entitled:

"Environmental Selection of Thymine over Uracil in Prebiotic Chemical Evolution: Insights from a Kinetic Monte Carlo Model."

This letter is **not** an appeal against the editorial decision itself. I fully recognize and respect the Editor's discretion to decline a manuscript without external peer review. My concern instead relates to the **consistency, transparency, and accuracy of the documented editorial process**.

Following the decision, I contacted the Editorial Office after observing several inconsistencies in the official record.

The decision letter explicitly stated:

"The comments of the reviewer(s) which led to this decision can be found at the bottom of this letter."

However, no reviewer comments were attached.

Subsequently, the Editorial Office informed me that this wording resulted from a **default system template** and that the manuscript had **not been sent for external peer review**.

While I appreciate this clarification, it leaves an important procedural inconsistency unresolved.

For a considerable period before the final decision, the ScholarOne system displayed the status:

Awaiting Reviewer Selection

To better understand the editorial workflow, I respectfully asked how this status related to a manuscript that was ultimately described as never having entered peer review.

Dr.r Frances Westall kindly replied that the delay occurred because the manuscript had only recently appeared on her action list and that she had recently undergone surgery. I sincerely appreciate her response and wish her a complete recovery.

However, although this explains the delay in processing, it does not explain the meaning of the ScholarOne status itself.

Consequently, the official record currently contains several documented inconsistencies:

- the decision letter states that reviewer comments formed the basis of the decision;
- the Editorial Office subsequently confirmed that no peer review had taken place;
- ScholarOne displayed "**Awaiting Reviewer Selection**" for an extended period;
- the explanation subsequently provided addressed only the processing delay and not the workflow status;
- no editorial explanation was provided for the desk rejection.

Individually, each of these issues might have a simple explanation. Collectively, however, they create uncertainty regarding the documented editorial history of the manuscript.

I therefore respectfully request clarification of the following questions:

1. What did the ScholarOne status "**Awaiting Reviewer Selection**" specifically represent in the editorial history of manuscript IJA-2026-0085?
2. Was the manuscript ever assigned for reviewer selection?
3. Were any reviewers identified, considered, or invited before the editorial decision was reached?
4. Why did the official decision letter refer to reviewer comments if no peer review had taken place?
5. What was the principal editorial basis for deciding that the manuscript should not proceed to external review?

I respectfully emphasize that my purpose is not to dispute the editorial outcome, but to ensure that the official record of the editorial process is transparent, internally consistent, and accurately documented.

Given the importance of transparency and procedural integrity in scholarly publishing, I would greatly appreciate your clarification.

I would also be grateful if the Editorial Office could include this correspondence in the official record of manuscript **IJA-2026-0085**.

Thank you for your time and consideration.

Yours sincerely,

Dr. Seyed Mohammad Reza Hashemi (Reza Hashemi)
